## *"AN AMALGAMATION OF EXPERIENCE"*

**Hi Project S.r.l.** was formed in 2002 amalgamating the founding partner's experience previously acquired in sectors connected with the applied mechanics and industrial design fields. The aim was to join forces to create a young, proactive company. Over the years it has consolidated,building the foundations necessary for its development.

The company has always been concerned about environmental issues and in 2006 it turned its attention towards the energy saving sector and channeled all its knowledge into creating LED lighting systems. LED light luminaires with an incredibly low energy consumption and constructed using fully recyclable materials.

The following year Hi Project produced and presented the very first products in the MYLED collection at the 'Costruire' building exhibition in Longarone (BL) Italy.

Working together with architects and design professionals has brought about a conceptual change, inducing the company to think about light and lighting products in a new way.
The lamps created for **Walt Disney and Du Pont** are an example together with other prestigious creations.

A fundamental step in the development of the most original and innovative luminaires is symbolized by the creation of LEDERA, a pure expression of art and design (designed by Architect Cini Boeri), a work of art on the thin dividing line where art meets industrial design.

This new and evolved development process highlighted the need for Hi Project to create a **new registered brand** that represents and protects the company's ideas and products.

# **Brillamenti** is born
## *"THE LIGHT WORKSHOP"*

**Brillamenti** (solar flares) is a clear reference to the characteristic solar phenomena and to nature, beauty, freedom of thinking and the will to achieve.
A concept that oozes energy, new ideas, development and transformation.

With **Brillamenti**, **Hi Project** fully expresses the concept of a product manufactured in Italy thanks to hard working professionals and craftsmen interacting, thinking, designing and working together just like a workshop in the old days.

# Our **Philosophy**
## *"GOOD LIGHT AT THE SERVICE OF MAN"*

There are two types of light: light that illuminates and glare that blinds.

A person's mental and physical well-being is an intrinsic part of **Brillamenti's** philosophy and can be conceptualized as "good light at the service of man" by understanding the new needs that must be taken into account concerning the relationship between man and his living space.

The **Brillamenti** brand sees light as signifying: Not just light for the sake of it but light that makes you feel good, that emphasizes shape and that interacts with darkness to create an atmosphere that produces sensations, bringing out emotions. Light that is good for the environment because it is made from materials that can be recycled indefinitely. Light that doesn't waste energy. Light as in the result of ideas and professionalism that give substance to a concept and make it usable.

*"**Brillamenti** continuously strives to make light a means that is a source of splendour, recreating a dynamic ambience which is really sunlight reflections on things."*

# Custom-tailored

Also your ideas can become a **Brillamenti** element! In the **"Lighting Laboratory"**, custom-tailored lamps will be realised and the best lighting solution for your space will be studied.

# Ongoing evolution

The **Lighting Laboratory** is constantly at work on new products by **Brillamenti**. We invite you to stay updated by periodically visiting our website.
